

Making External API Requests

Armen Avanesi
SOFTWARE DEVELOPER

Making a POST/PUT/DELETE Request

Working with Auth Headers

Basic Authorization

Authorization: Basic username:password

The “axios” Package

You may want to experiment
with other packages in the
Node community

Overview

Well-maintained

Works Client and
Server-side

Streaming

Promise Based
API

Automatic
Transformation of
Data into JSON

Package Installation

// installing with yarn:

yarn add request ←

// installing with npm

npm install request ←

It may speed up
development to use certain
tools and abstractions

Summary

Perform GET requests with:

- The request() method
- The get() method

Perform POST/PUT/DELETE requests

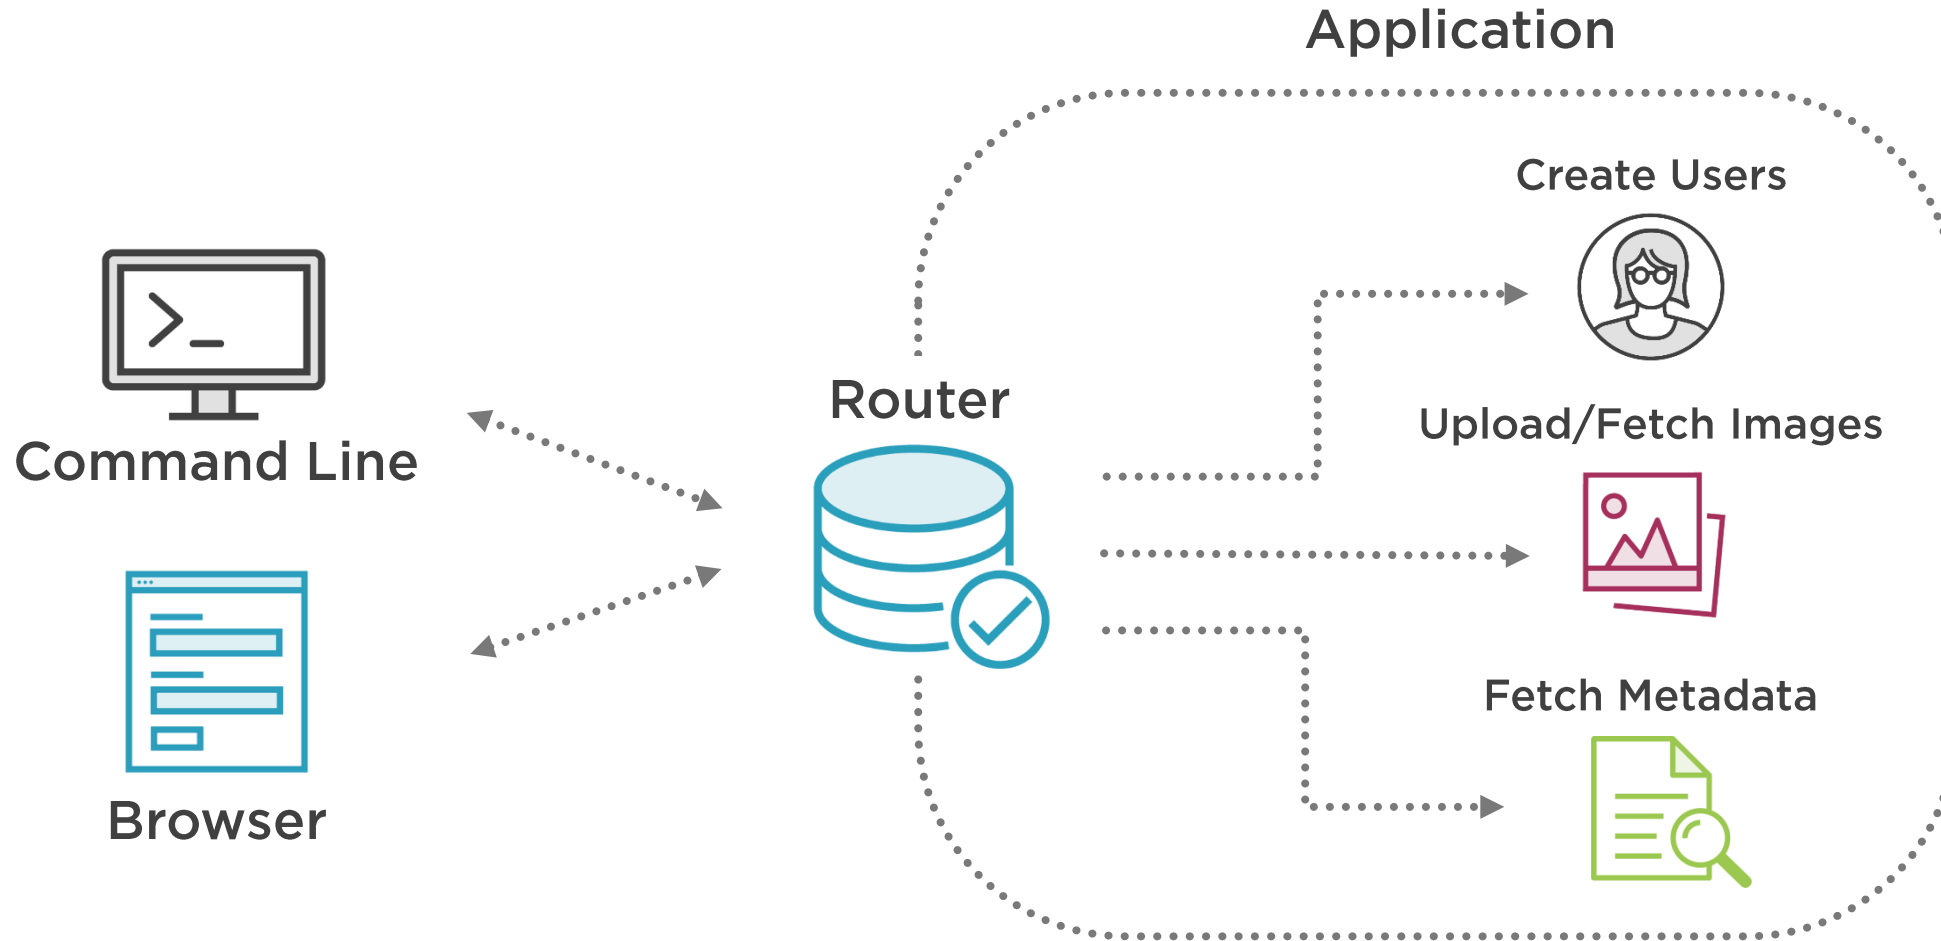

Working with streamed data when:

- Receiving a response from a request
- Writing data into a request

Implement authentication headers

The “axios” package

Application Architecture

Congratulations!
